Teaching Culturally Controversial Science Topics Seminar

FRI 10.14.22, 4:00-5:30 pm

Middle Tennessee State University
Science Building (SCI), Room 1006

featuring...

Dr. Elizabeth Barnes

Assistant Professor
Biology Education

The American public is more polarized than ever about culturally controversial science topics like climate change, evolution, and vaccines. In this seminar, we will discuss how scientists and science teachers can play a role in mitigating this polarization through inclusive and culturally competent science teaching and communication.

Dr. Barnes' research has been featured in Scientific American, and on BBC and NPR.
